# We simplify construction

At OC IMP Klima we are driven by a strong desire to continuously generate improvements and to simplify construction. We do that by developing products and systems that are easy to use and energy efficient, together with industry-leading knowledge, support, logistics and efficient availability. We want to simplify everything – from designing, ordering, delivery, goal achievement and installation to the entire way of doing business with us. By simplifying in every stage of the construction process, we also contribute to energy-efficiency.

## A good thinking company

Good thinking is a deeply rooted philosophy that guides us in everything we do. We firmly believe that good thinking makes good solutions to the challenges we all face. Taking responsibility for what we do and how we do things is therefore important to us. Because good thinking is not only about making life easier and more comfortable for our customers and end users. It is also a matter of thinking in a global perspective, all the time. Knowing that we at OC IMP Klima are helping to make the world a better place.

## Premium class plug&play air handling units

The upgraded OC IMP Klima compact air handling units range was developed to ensure perfect indoor climate for different types of smaller non-residential premises, such as offices, restaurants, hotels and shops.

### Impressive technical features paired with ultimate user experience

The new CompAir range boasts significantly improved housing characteristics, premium-class components, more flexible installation in limited spaces and an optimized price-performance ratio. A new cloud-based control system allows simple interconnection with other HVAC elements and user friendly setting of the desired parameters via PC or smartphone.

## Advanced selection software

An advanced software selection tool AirCalc++, available in multiple languages, makes it easy to determine the optimum unit for individual premises.

Besides calculations, the program also allows to create drawings, which can be exported to AutoCad, detailed project descriptions and a thermodynamic process Mollier h x diagram.

## Convincing technical performance and top class components

Housing	BASIC	PLUS
Thermal transmittance	T2	T2
Thermal bridge factor	TB3	TB2
Casing strength	D1	D1
Air leakage	L1	L1
Panel thickness	50 mm	50 mm

One of the most distinctive features of the new compact AHU range is a high quality housing with 50 mm panels, insulated with mineral wool, and convincing technical characteristics. For higher resistance the panels are powder-coated as standard. Optionally they are also available in Aluzinc.

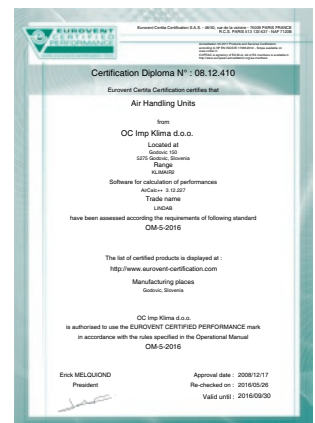

The implementation of EC fans results in higher energy efficiency, while low air velocities lead to better performance.

Another important competitive advantage are the multiple coils options, including electrical pre-heaters, electrical or water heaters, water cooling coils or DX coils.

## Certified quality and impressive energy efficiency

CompAir air handling units are Eurovent certified within the existing Klimair2 range and fulfill the requirements of ErP 2016/ErP 2018 according Ecodesign Directive (2009/125/EC).

Due to a high heat recuperation level of up to 90% (CompAir CF) / up to 85% (CompAir RW), the energy consumption for the ventilation of buildings is minimized.

## User friendly control system

Our plug&play air handling units are equipped with an advanced integrated control system. A new cloud based platform allows flawless communication to achieve the best system performance.

Integration on automation level without any need for Scada-based support.

Immense flexibility regarding user functions and price level due 3 different user levels: Basic, Standard and Advanced  
All units are fully wired and pre-tested at the factory.

## Immense flexibility in limited spaces

The new compact range features three different types of connections placement, so that the units also can be fitted in very limited spaces:

- Horizontal connections (H) - 4 side connections.
- Half-vertical connections (HV) – 2 side and 2 top connections.
- Vertical connections (V) - 4 top connections.

Connections can be circular (with OC IMP Klima Safe double rubber seal) or rectangular (fix or flexible).

For even greater flexibility, all basic units are available in monoblock or splitted version.

## Large accessory range

With our customers' needs in mind, we have decided to offer a broad range of standard accessories, such as:

- Valves
- Drive valves
- Roofs
- Hoods
- Duct silencers
- Duct coils
- Feet
- Anti-vibration pads

# Compact Air Handling Units - Overview

## CompAir CF with counterflow heat exchanger

- 7 sizes, covering air flows from 350 up to 10 700 m<sup>3</sup>/h.
- Highly efficient counterflow heat exchanger with by-pass function.
- Available as monoblock or splitted version.
- Indoor or outdoor version.
- Horizontal, half-vertical or vertical connections.
- Plug&play unit with integrated control system.

## CompAir RW with rotary wheel

- 6 sizes, covering air flows from 910 up to 10 700 m<sup>3</sup>/h.
- Highly efficient rotary wheel heat exchanger.
- Available as monoblock or splitted version.
- Indoor or outdoor version.
- Horizontal, half-vertical or vertical connections.
- Plug&play unit with integrated control system.

Air flow range CompAir CF

Air flow range CompAir RW

# CompAir CF

with counterflow heat exchanger

## Description

CompAir CF is a family of air handling units in seven sizes, covering air flow volumes from 350 up to 10 700 m<sup>3</sup>/h, and boasting up to 90% heat recovery of the exhaust air. As an additional option heating and/or cooling can be included. The basic unit is available as monoblock or splitted version, with various connection options and is designed for both indoor and outdoor installation. The integrated control system is available in three versions: Basic, Standard and Advanced.

## Basic configuration:

- Highly efficient counterflow heat exchanger.
- Inlet and outlet fans with EC motors.
- Panel or bag filter F7 on inlet and M5 or F7 on outlet side.

## Housing:

- Basic housing: panels TopAir: T2, TB3 class.
- Plus housing: panels TopAir Plus; T2, TB2 class.
- Exterior of the panels coated in RAL 7035, option: Aluzinc.

## Optional sections:

- Water heater or electrical heater.
- Water cooler or DX cooler.
- Preheater.
- Duct heater and cooler.

## Accessories:

- CO<sub>2</sub> or pressure sensors.
- Fire by-pass.
- Smoke detector.
- Regulation of external humidifier.
- Roofs, inlet and outlet hoods for outdoor version.
- Circular or rectangular duct connections.
- Support feet.
- Syphons.

Recuperation type	Designation	Max. capacity [m <sup>3</sup> /h]	SFP [w/m <sup>3</sup> /s] ( $\Delta p_{ext}=200Pa$ )*	Connection [mm]		Connection placement **	Heat recovery***
				○	□		
◇	CF 1000	1150	900	Ø 315	390 x 315	H, HV, V	82,7%
◇	CF 2000	2400	746	Ø 400	675 x 410	H, HV, V	83,2%
◇	CF 3000	3300	850	Ø 500	795 x 410	H, HV, V	83,2%
◇	CF 4000	4700	833	Ø 500	1100 x 410	H, HV	83,1%
◇	CF 6000	7000	870	Ø 630	1420 x 510	H, HV	84,4%
◇	CF 8000	8700	830	Ø 800	1560 x 610	H, HV	84,2%
◇	CF 10000	10700	802	Ø 800	1915 x 610	H, HV	84,2%

\* SFP value for supply fan at V<sub>nom</sub> and basic unit configuration.  
 \*\* H = horizontal (4 side connections), HV = half vertical (2 top + 2 side connections), V = vertical (4 top connections).  
 \*\*\* Heat recovery is calculated according to EN 308 standard. In real conditions efficiencies up to 90% can be reached.

# CompAir CF

Connection placement versions – options to be selected in AirCalc++

## CompAir CF with 4 side connections (H)\* – 7 sizes up to 10 700 m<sup>3</sup>/h

fresh air intake on upper side

fresh air intake on lower side

## CompAir CF with 2 side and 2 top connections (HV)\* – 7 sizes up to 10 700 m<sup>3</sup>/h

fresh air intake on upper side

fresh air intake on lower side

## CompAir CF with 4 top connections (V) – 3 sizes up to 3 300 m<sup>3</sup>/h

\* the stated connection placement options are valid for both monoblock and splitted version

# CompAir CF (H)

Units with horizontal connections (H)

## CompAir CF (H) monoblock, fresh air intake on upper side

## CompAir CF (H) splitted, fresh air intake on lower side

## CompAir CF (H) splitted version, with additional sections

- All configurations are available:
- With fresh air intake on lower or upper side.
  - In splitted or monoblock version.
  - With round connections (fix) or rectangular connections (fix or flexible).

# CompAir RW

## Description

CompAir RW is a family of air handling units in six sizes, covering air flow volumes from 910 up to 10 700 m<sup>3</sup>/h and boasting up to 85% heat recovery of the exhaust air. As an additional option heating and/or cooling can be included. The basic unit is available as monoblock or splitted version, with various connection options and is designed for both indoor and outdoor installation. The integrated control system is available in three versions: Basic, Standard and Advanced.

## Basic configuration:

- Highly efficient rotary wheel heat exchanger.
- Inlet and outlet fans with EC motors.
- Bag or panel filter F7 on inlet and M5 or F7 on outlet side.

## Housing:

- Basic housing: panels TopAir: T2, TB3 class.
- Plus housing: panels TopAir Plus; T2, TB2 class.
- Exterior of the panels coated in RAL 7035, option: Aluzinc.

## Optional sections:

- Water heater or electrical heater.
- Water cooler or DX cooler.
- Duct heater and cooler.

## Accessories:

- CO<sub>2</sub> or pressure sensors.
- Fire by-pass.
- Smoke detector.
- Regulation of external humidifier.
- Roofs, inlet and outlet hoods for outdoor version.
- Circular or rectangular duct connections.
- Support feet.
- Syphons.

Recuperation type	Designation	Max. capacity [m <sup>3</sup> /h]	SFP [w/m <sup>3</sup> /s] ( $\Delta p_{ext}=200Pa$ )*	Connection [mm]		Connection placement **	Heat recovery***
				○	□		
○	RW 2000	2400	807	Ø 400	675 x 410	H, HV, V	78,9%
○	RW 3000	3300	888	Ø 500	795 x 410	H, HV, V	76,8%
○	RW 4000	4700	823	Ø 500	1100 x 410	H, HV, V	72,2%
○	RW 6000	7000	803	Ø 630	1420 x 510	H, HV	74,5%
○	RW 8000	8700	742	Ø 800	1560 x 610	H, HV	73,6%
○	RW 10000	10700	755	Ø 800	1915 x 610	H, HV	77,9%

\* SFP value for supply fan at  $V_{nom}$  and basic unit configuration

\*\* H = horizontal (4 side connections), HV = half vertical (2 top+ 2 side connections), V = vertical (4 top connections)

\*\*\* Heat recovery is calculated according to EN 308 standard. In real conditions efficiencies up to 85% can be reached.

# CompAir RW

Connection placement versions – options to be selected in AirCalc++

## CompAir RW with 4 side connections (H)\* – 6 sizes, airflows up to 10 700 m<sup>3</sup>/h

fresh air intake on lower side

## CompAir RV with 2 side and 2 top connections (HV)\* – 6 sizes, airflows up to 10 700 m<sup>3</sup>/h

fresh air intake on lower side

## CompAir RW with 4 top connections (V) – 3 sizes, airflows up to 4700 m<sup>3</sup>/h

\* the stated connection placement options are valid for both monoblock and splitted version

# CompAir RW (H)

Units with horizontal connections (H)

## CompAir RW (H) monoblock version

## CompAir RW (H) splitted version with additional sections

All configurations are available:  
- In splitted or monoblock version.  
- With round connections (fix) or rectangular connections (fix or flexible).

# Technical data

## CompAir RW with horizontal (H) connections (2 + 2 side connections)

# Components & Accessories

Recuperators, actuators, fans and filters from most renowned European suppliers.

Simple adding of additional sections (heaters, coolers, eliminators, etc.) to the basic unit.

# Control System

## Advanced cloud-based controls

- The integrated control system is available in three versions: Basic, Standard and Advanced, with different functions (see table below) and price levels.
- The user friendly interface is designed in multiple languages.

### BASIC controls:

- Compact preprogrammed controller with internal display allows easy controlling of basic functions and represents a reliable low-price solution for less demanding applications.

### STANDARD controls:

- This version offers a large range of control functions, which are accessible via a stand-alone display and configuration unit.

### ADVANCED controls:

- The modern swipe and touch display is designed to make the user interface simpler and more intuitive, with easy browsing between the screens.
- The air handling unit is also accessible via the cloud application "OC IMP Klima Connect".

Smartphone/Cloud connectivity			•

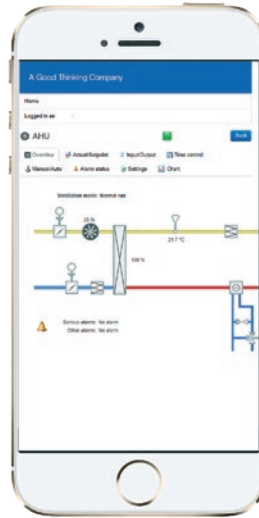

Note: (•) = optional feature, • = default feature

### BMS connectivity - options

- TPC/IP Modbus communication.
- TPC/IP BACnet communication.
- TCP/IP port can be used to connect the controller to the cloud, or optionally, connect to the controller via remote IP address.

### Smartphone connectivity

- The Smartphone application enables access to the controller with a web server from any mobile phone, tablet or computer with a web browser. You can control and supervise building systems, read and follow up values, change settings, manage alarms, etc. – at all times, regardless of your location.

### Cloud connectivity

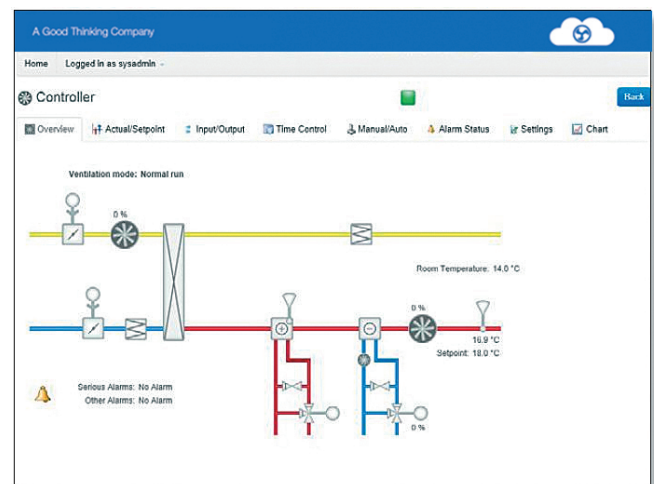

- For users, who demand a complete control of the buildings indoor climate portfolio, our cloud application is the tool of choice. The web-based platform can always be accessed by various users, regardless of their current location.
- Once the controller has been configured, a dynamic flow window is automatically created and current configuration values are shown in real time.

### Logging

- Log values can be stored and read for up to one year in the cloud app. The controller sends log values to the cloud every ten minutes and can up to a month be viewed graphically at all times. It is also possible to view data from previous months or to save the complete log as an Excel file.

### Connection

- In order to access the cloud app via a network, a network cable connected to the Internet is required. A 3G modem can also be used to access the cloud app.
